

Managing Risks When Working at Heights

**SAFETYTM
ACTION**

**AXIOM
TRAINING**

This course teaches risk management and the prevention of safety incidents and is critical in managing workplace safety under the Health and Safety at Work Act.

Capacity

12 Attendees

Duration

2 Days (16 Hours)

Locations

At our local training centre
At your own site or workplace

Overview

People who complete this unit standard will be able to work well in established industry operating and maintenance environments and plan tasks and operations where fall risks exist. This is a practical programme that requires the completion of two safety plans from a work environment.

Prerequisites

Unit Standard **23229** - Use safety harness systems when working at height
A relevant level of physical fitness and ability to work at heights

Course Content

The safety plans developed will be specific to a particular task or activity within your relevant industry and will produce a 'best fit' solution to both control risk of falls as well as effectively complete the required operation.

- ✓ Assess the risks when work is to be undertaken at height and there is a fall potential
- ✓ Prepare and review safety plan to manage risk when fall prevention strategies are required

Unit Standards

23231

Develop a safety plan to manage risks when individuals are working at height and fall prevention strategies are required
